2 hours 30 minutes

PAPER 2 — STRUCTURED QUESTIONS — CALCULATOR ALLOWED

These are **original ACADEX questions** written to match ZIMSEC syllabus structure, mark allocations and command words. They are **not** leaked or copied official papers. This script is unique to November 2023 4004/2.

Additional materials: Mathematical tables or a non-programmable calculator may be used.

INSTRUCTIONS: Section A: answer all questions (52 marks). Section B: answer any four of the seven questions (48 marks).

SECTION A (52 marks) — Answer ALL questions

1. (a) Expand and simplify $(4x - 2)(x + 2)$. [3] <<
>> (b) Factorise completely $8x^2 + 4x$. [2] <<
>> (c) Solve $4(x - 2) = 12$. [3] <<
>> (d) Simplify $(x^2 - 16)/(x - 4)$. [2]
[10]

2. AB is parallel to CD. Transversal PQ meets AB at X and CD at Y. <<
>> (a) Angle $AXY = 61^\circ$. Find the corresponding angle at Y. Give a reason. [2] <<
>> (b) Find the co-interior (allied) angle to 61° . Give a reason. [2] <<
>> (c) In triangle PQR, $P = 61^\circ$ and $Q = 35^\circ$. Calculate R. [2] <<
>> (d) State whether triangle PQR is acute, right-angled or obtuse. Give a reason. [2] **[8]**

3. A rectangle measures 16 cm by 9 cm. A border of width 2 cm is drawn around the outside. <<
>> (a) Find the area of the rectangle. [2] <<
>> (b) Find the area of the outer rectangle. [3] <<
>> (c) Hence find the area of the border. [3] **[8]**

4. The line L has equation $y = -2x + 4$. <<
>> (a) Write down the gradient of L and the coordinates of the y-intercept. [2] <<
>> (b) Find the coordinates of the point where L meets the x-axis. [2] <<
>> (c) Find the gradient of the line joining A(2, 3) and B(6, 9). [2] <<
>> (d) Write the equation of the line parallel to L that passes through (0, 1). [2]
[8]

5. The table shows values of x with frequencies f: <<
>>

x=1, f=2,	x=2, f=4,	x=5, f=5,	x=6, f=6,	x=6, f=7.
-----------	-----------	-----------	-----------	-----------

<<
>> (a) State the modal value of x. [1] <<
>> (b) Calculate Σf and Σfx . [3] <<
>> (c) Calculate the mean of x. [3] <<
>> (d) Find the range of x. [2] **[9]**

6. $A = \begin{pmatrix} 4 & 2 \\ 3 & 1 \end{pmatrix}$ and column vector $u = \begin{pmatrix} 4 \\ 1 \end{pmatrix}$.
[3] (a) Calculate Au .
[2] (b) Find $\det A$.
[2] (c) Describe fully the transformation represented by $\begin{pmatrix} 0 & -1 \\ 1 & 0 \end{pmatrix}$.
[2] (d) Find the image of the point $(4, 1)$ under a reflection in the y -axis. [2] **[9]**

SECTION B (48 marks) — Answer any FOUR of the seven questions

- 7.** (a) Factorise $x^2 - 8x + 12$. [3] (b) Hence solve $x^2 - 8x + 12 = 0$. [2] (c) Write down the roots of $(x - 2)(x - 6) = 0$. [1] (d) Sketch $y = (x - 2)(x - 6)$, showing the intercepts with both axes. [3] (e) State the coordinates of the turning point. [3] **[12]**
- 8.** In triangle ABC, $A = 50^\circ$, $B = 60^\circ$ and $BC = a = 8$ cm. (a) Calculate C. [2] (b) Write the sine rule. [2] (c) Calculate $AB = c$. [5] (d) State whether the triangle is acute or obtuse, with a reason. [3] **[12]**
- 9.** O is the centre of a circle. A, B and C lie on the circumference. AB is a diameter. Angle BAC = 26° . (a) Find angle ACB. Give a reason. [3] (b) Find angle ABC. [2] (c) Find angle BOC (angle at the centre standing on arc BC). Give a reason. [4] (d) Point D lies on the remaining circumference. Find angle BDC. Give a reason. [3] **[12]**
- 10.** The position vectors of A and B are $a = (6 ; 3)$ and $b = (4 ; 5)$. M is the midpoint of AB. (a) Find vector AB. [3] (b) Find $|AB|$. [3] (c) Find the position vector of M. [3] (d) Show that $AM = \frac{1}{2} AB$. [3] **[12]**
- 11.** 50 candidates sat a Mathematics paper marked out of 50. A cumulative frequency curve (ogive) is drawn. (a) State the median position on the cumulative-frequency axis. [2] (b) Describe how to read the median mark from the ogive. [3] (c) The lower quartile is at position $n/4$ and the upper quartile at $3n/4$. Write these positions as numbers. [3] (d) Define the interquartile range and state one advantage of the IQR over the range. [4] **[12]**
- 12.** Triangle PQR has $P(2, 4)$, $Q(4, 4)$ and $R(2, 7)$. (a) P' is the image of P under reflection in the y-axis. Write down the coordinates of P' . [2] (b) Q is translated by the vector $(1 ; 2)$. Find the image Q'' . [3] (c) The matrix $\begin{pmatrix} 0 & -1 \\ 1 & 0 \end{pmatrix}$ represents a transformation T. Describe T fully. [4] (d) Find $T(Q)$, the image of Q under T. [3] **[12]**
- 13.** (a) y varies directly as x. When $x = 6$, $y = 12$. (i) Find the equation connecting y and x. [3] (ii) Find y when $x = 10$. [2] (b) z varies inversely as x. When $x = 3$, $z = 12$. Let this value of z be z_0 . (i) Find z when $x = 6$. [4] (ii) Describe what happens to z when x is doubled. [3] **[12]**

END OF QUESTION PAPER

Worked solutions and mark-scheme notes are inside the ACADEX app (Extract & Study).
